A4: Not Classifiable as a Human Carcinogen: Agents which cause concern that they could be carcinogenic for humans but which cannot be assessed conclusively because of the lack of data. In vitro or animal studies do not provide indications of carcinogenicity which are sufficient to classify the agent into one of the other categories.

A5: Not suspected as a Human Carcinogen: The agent is not suspected to be a human carcinogen on the basis of properly conducted epidemiological studies in humans. These studies have sufficiently long follow up, reliable exposure histories, sufficiently high dose, and adequate statistical power to conclude that exposure to the agent does not convey a significant risk of cancer to humans; OR, the evidence suggesting a lack of carcinogenicity in experimental animals is supported by mechanistic data.

Biological Exposure Indices

Not established

Appropriate engineering controls

Ensure adequate ventilation. Handle in accordance with good industrial hygiene and safety practices.

Individual protection measures, such as personal protective equipment

Avoid contact with eyes. Normally no personal protective equipment is required. Keep good industrial hygiene. Do not eat, drink or smoke at the work place.

Protective clothing should be selected specifically for the working place, depending on concentration and quantity of the hazardous substances handled. The resistance of the protective clothing to chemicals should be ascertained with the respective supplier.

Eye / face protection

Not required in normal handling and use. Avoid contact with eyes.

Recommended: Use eye protection according to EN 166.

Skin protection

Not required in normal handling and use.

Respiratory protection

Not required in normal handling and use.
